

WITH INTERNATIONAL AND FONTAINE FIFTH WHEELS,

YOU'VE GOT A LOCK ON PERFORMANCE.

The fifth wheel is an important component of a heavy truck. It keeps your trailer secure, giving you peace of mind as you keep the freight moving.

Fontaine is the exclusive fifth wheel supplier for International with innovations like the patented No-Slack® II jaw and wedge locking system. A full spectrum of stationary and sliding models for

standard, heavy and extra-heavy-duty weight-bearing capacities are available. Fontaine is the only supplier that offers both cast or pressed fifth wheels.

Best of all, Fontaine® fifth wheels are engineered to work with International® 8000 and 9000i Series trucks – bringing increased reliability, improved serviceability and low cost of ownership to your operation.

CAST TOP PLATE DESIGN.

NO-SLACK® II (7000 SERIES)
55,000 pounds vertical load.
150,000 pounds drawbar pull.

The 7000 Series fifth wheel features a cast design and is designed for standard and moderate-duty applications. The patented self-adjusting No-Slack® II locking mechanism has a positive secondary lock that can only be released by pulling the handle. This design – available only from Fontaine – eliminates the possibility of false couplings to give you even greater security. The pull force required to open the wheel is only 85 pounds. Approximate weight: 235 lb (107 kg).

PRESSED-STEEL DESIGN.

NO-SLACK® II (6000 SERIES)
50,000 pounds vertical load.
150,000 pounds drawbar pull.

The innovative 6000 Series offers all the benefits of our 7000 Series, but in a pressed-steel design. It also features the patented self-adjusting No-Slack® II locking mechanism with a positive secondary lock that can only be released by pulling the handle. The pull force required to open the wheel is only 65 pounds. Approximate weight: 223 lb (101 kg).

FONTAINE.

THE FIRST NAME IN FIFTH WHEELS.

SIMPLY BETTER BY DESIGN.

The computer-designed surface contact area gives you greater road stability and durability.

The patented safety trigger eliminates the possibility of false trailer couplings.

For greater security, the patented positive secondary lock can only be released by pulling the handle. And the patented No-Slack® II lock is easier to engage and disengage.

The patented No-Slack® II jaw and wedge locking system eliminates slack automatically to save time, cut labor costs and reduce wear.

Fontaine is the only provider offering a choice of cast or pressed-steel fifth wheels.

Fontaine was the first fifth wheel manufacturer in North America to qualify for ISO-9001 certification. Now Fontaine has raised the quality bar even higher by achieving QS-9000 status, which mandates meeting additional requirements beyond those required for ISO-9001 certification.

WE COUPLE INNOVATION WITH COMMITMENT FOR A TOTAL FIFTH WHEEL SOLUTION.

Fontaine Fifth Wheel® is a leading manufacturer of fifth wheel coupling devices and has delivered proven solutions to the heavy truck industry for more than 60 years.

At our state-of-the-art QS-9000-certified manufacturing facilities, advanced design, finite element analysis, solid modeling and extensive testing ensure products of superior quality, strength and reliability.

Designed, engineered and built to the highest standards – Fontaine® fifth wheels are an ideal match for International® trucks.
